

MIQEN

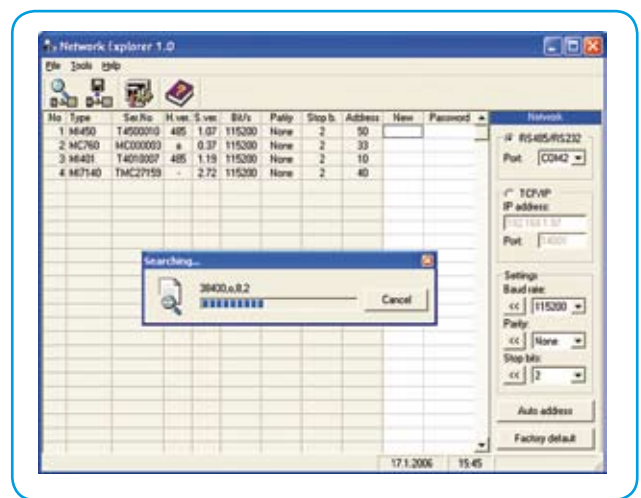

MiQen software is a tool for complete monitoring of the measuring instruments. RS485/RS232 or TCP/IP communication is used for connection with a PC. A user-friendly interface consists of five segments: device management, counter settings, real-time measurements, data analyses and programs updating.

Device management

As easy as possible.

Just select the device in a favourites line.

Use the network explorer to set and explore the devices network. Communication parameters of all devices and their addresses in network can be easily set.

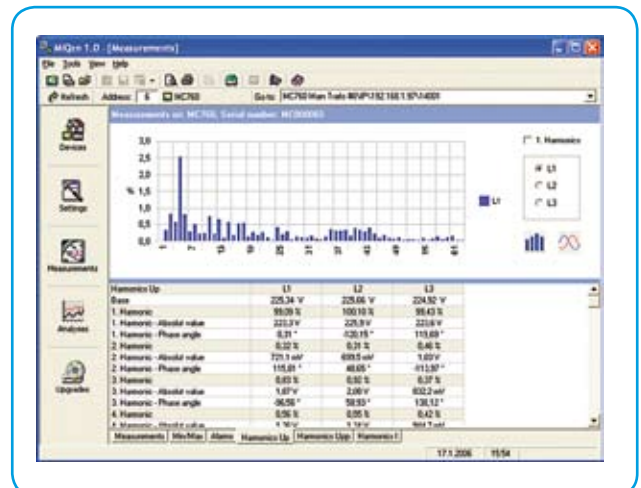

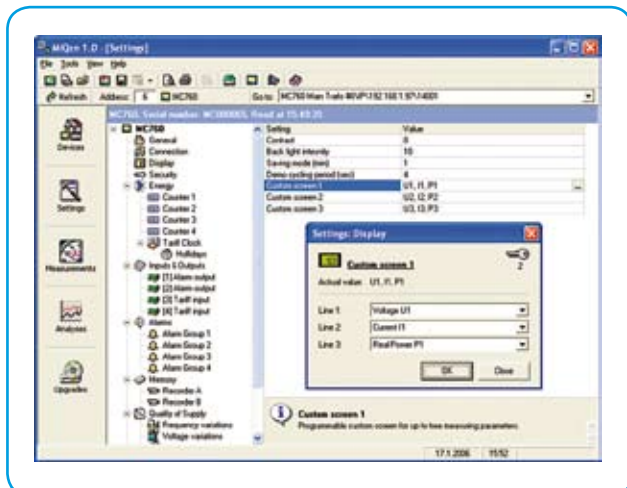

Instrument setting

Multi Register Edit technology assures a simple modification of settings that are organised in tree structures. Besides settings transfer into the instrument, storing and reading from the setting files and MMCs are also available.

Real-time measurement

All supported measurements can be seen in real time in a table form, while harmonics and their time-reconstructed signals are also displayed graphically. For further processing of the results of measurements, copying via a clipboard into standard Windows formats is supported.

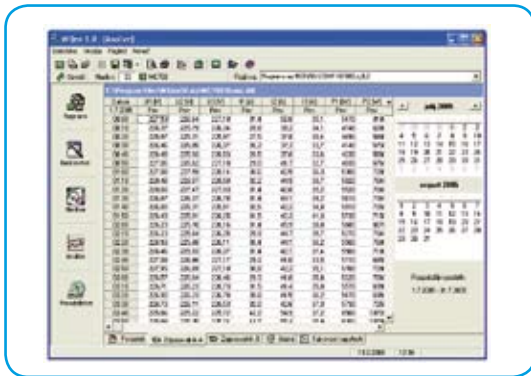

MIQEN

Data analysis

Analysis can be performed for the instruments with a built-in memory. Recorded quantities can be monitored in a tabular or graphical form, events that triggered alarms can be analysed or a report on quality of supply voltage can be made. All data can be exported to the Access data base, Excel worksheets or text files.

Programs updating

Always use the latest version of software, both MiQen and software in the instrument. The program automatically informs you on available upgrades that can be transferred from the web site and used for upgrading.

System requirements:

Windows 98, 2000, Millennium, XP, NT4.0, 100 MB capacity on a hard disc, VGA Screen, 64 MB RAM, CD drive, RS232 communication port

There are two versions of MIQEN software:

- **standard edition** - all functions available except for data analysis, free of charge
- **professional edition** - all functions available for installation, you have to buy a CD key
